Question 9:

JZ 0x837BBE1

JGZ 0x837BBE1

Question 10:

Part 1:

This set of instructions swaps the values of both r8 and r9, moving what was in r8 to what is in r9, and what was in r9 to r8.

Part 2:

This only works because XOR is reversable. If you do an XOR with the same values two times, you get the first value back.
